

Amendments to the Claims:

Please amend the claims as follows:

Claims 1-15 (Canceled)

Claim 16 (New): An information storage medium configured to have data recorded thereon and data reproduced therefrom by at least one of a recording and/or reproducing apparatus, the information storage medium being configured to comprise:

a first recording area configured to record information of an additional audio stream and still picture information using the recording apparatus, the still picture information including,

a still picture video object group having at least one still picture video object; and

a second recording area configured to record management information including still picture video object group information and still picture additional audio file information,

the still picture video object group information managing a corresponding still picture video object group and including,

still picture video object entry type information including a temporary erase flag indicating whether the corresponding still picture video object is in a temporarily erased state, and

video part size information indicating a size of a video part of the corresponding still picture video object,

the still picture additional audio file information including additional audio entry information for accessing the additional audio stream, and

number information of the additional audio entry information.

Claim 17 (New): An information recording method for recording still picture information on an information storage medium configured to have data recorded thereon and data reproduced therefrom by at least one of a recording and/or reproducing apparatus, the information storage medium including,

a first recording area configured to record information of an additional audio stream and still picture information using the recording apparatus, the still picture information including,

a still picture video object group having at least one still picture video object; and

a second recording area configured to record management information including still picture video object group information and still picture additional audio file information,

the still picture video object group information managing a corresponding still picture video object group and including,

still picture video object entry type information including a temporary erase flag indicating whether the corresponding still picture video object is in a temporarily erased state, and

video part size information indicating a size of a video part of the corresponding still picture video object,

the still picture additional audio file information including additional audio entry information for accessing the additional audio stream, and

number information of the additional audio entry information,

the information recording method comprising:

recording the still picture information on the first recording area; and

recording the still picture video object group information in the second recording area.

Claim 18 (New): An information reproducing method for reproducing still picture information recorded on an information storage medium configured to have data recorded thereon and data reproduced therefrom by at least one of a recording and/or reproducing apparatus, the information storage medium including,

a first recording area configured to record information of an additional audio stream and still picture information using the recording apparatus, the still picture information including,

a still picture video object group having at least one still picture video object; and

a second recording area configured to record management information including still picture video object group information and still picture additional audio file information,

the still picture video object group information managing a corresponding still picture video object group and including,

still picture video object entry type information including a temporary erase flag indicating whether the corresponding still picture video object is in a temporarily erased state, and

video part size information indicating a size of a video part of the corresponding still picture video object,

the still picture additional audio file information including additional audio entry information for accessing the additional audio stream, and

number information of the additional audio entry information,

the information reproducing method comprising:

reproducing the still picture information recorded in the first recording area based on the still picture video object group information stored in the second recording area.

Claim 19 (New): An information reproducing apparatus for reproducing still picture information recorded on an information storage medium configured to have data recorded thereon and data reproduced therefrom by at least one of a recording and/or reproducing apparatus, the information storage medium including,

a first recording area configured to record information of an additional audio stream and still picture information using the recording apparatus, the still picture information including,

a still picture video object group having at least one still picture video object; and

a second recording area configured to record management information including still picture video object group information and still picture additional audio file information,

the still picture video object group information managing a corresponding still picture video object group and including,

still picture video object entry type information including a temporary erase flag indicating whether the corresponding still picture video object is in a temporarily erased state, and

video part size information indicating a size of a video part of the corresponding still picture video object,

the still picture additional audio file information including additional audio entry information for accessing the additional audio stream, and

number information of the additional audio entry information,

the information reproducing apparatus comprising:

a reproducer configured to reproduce the still picture information recorded in the first recording area based on the still picture video object group information stored in the second recording area.
